Command	ADESTROY

PURPOSE   Destroy analyzer and free the occupied space

PARAMETERS

ANLID	Analyzer identifier
/NOCONFIRM	No confirmation of analyzer destruction
/NOLIST	Suppress output of command

FUNCTION   The specified analyzer is destroyed and the space it occupies is freed.

To reset spectra contents to zero use ACLEAR!

REMARKS   A specific analyzer or a group of analyzers can be selected by use of the wildcard "*".
Resident analyzers (analyzers defined in the analysis program by the macro AGEN) cannot be destroyed.
If not suppressed by /NOCONFIRM, prompting for confirmation precedes any analyzer destruction in the case of wildcards used.

EXAMPLE   ADES *
Destroy all dynamically created analyzers.
